Welcome to Volume 4 Issue 2 of The Python Papers. We have another milestone to announce – This issue marks our 10<sup>th</sup> issue since 2006 with 18 peer-reviewed articles, 25 industrial (editorial-reviewed) articles and 4 Python User Group highlights.

Thank you everyone for the support in contributions and readership so far. We certainly hope to see more coming and doubling the number of articles in the next 10 issues.

In this issue, we have 2 Call for Papers for Kiwi PyCon, to be held later this year in Christchurch, New Zealand; and PyCon Asia-Pacific, to be held in the middle of next year in Singapore. Personally, I see this as an important milestone for Python development and outreach in the Asia-Pacific rim. From the editorial perspective, we are happy to announce that the proceedings of both conferences will be published as volumes under The Python Papers Monograph.

We hope that this will set the stage for more Python related developments in the Asia-Pacific region and more platforms for Pythonic discussions.

That is all I have to announce.

Thank you once again for your support.

Happy reading.
